Deployment Template

Deployment Instructions

1. Organization of Submission

Organization of files is managed by Xcode, so just open the .xcodeproj file in the root directory of the archive.

2. Application Setup

Nothing but Xcode 7.1 is required to build the demo app and run it in the simulator.

3. Deployment Instructions

To build the app for a device you need a Apple Developer Program membership and configure Xcode correctly for provisioning. See the official documentation for details.

4. Starting

Select the scheme for the platform you want to build for and hit Build & Run.

5. Verification

Once the app is running you should see a collection of stock photos.
